

Foaming paste

Character:

Appearance: light yellow paste

Viscosity: 280000-300000 cps

Application: lycra, cotton.

Operation suggestions:

1. 100-120 mesh;
2. Based on the foaming height to adjust the ratio of rubber paste and foaming paste (general rubber paste 60-70%, foaming paste 30-40%). Directly printing the mixing paste 2-3 times or printing clear rubber paste 2-3 times for base, could improve the elasticity, hand feeling and smoothness of fabric.

Performance test: 40°C washing 2 hours by machine will not fall off the paste.
