

## Technical data sheet

### Additives

#### General information

These additives used to make up the ink properties according to application.

- 1. Reducer G800:** This product used for all Plastisol series. To reduce the ink viscosity adds 5: 10% by weight to the ink if needed to be suitable for application.
- 2. Reducer G801:** This product formulated to reduce the hot-split transfer inks. You can use it up to 20%. Actually it is base not liquid so it does not affect ink wash ability. You can use this base for metallic powder as it is clear and shiny. You should choose metallic Or glitter ecology also.
